

Technical Data

Compac Mortar Plasticiser

Description

Compac Mortar Plasticiser to enhance workability, reduce cracks and increase adhesion on bricklaying and rendering to reinforce the strength of walls.

- Improve adhesion, workability thus easier in rendering with less cracks or peeling off
- Increase cohesion in brick layers and reinforce the strength of concrete structure
- Time and cost savings

Description For Use

1. Mix Compac Mortar Plasticiser with clean water before mixing into mortar.
2. Add the mixture in no.1 into sand and cement or ready made mortar and then mix well.
Use the well concrete mixture for bricklaying or rendering.

Compac Concrete Waterproofer

Description

Compac Concrete Waterproofer agent which can be applied by brush or spray to form crystals or mix it into cement to increase concrete more dense and prevent water penetration into concrete. Suitable for high humidity areas e.g. low part of house, cellar etc.

- Increase concrete density thus improve waterproofing property and prevent cracks
- Improve workability.
- Suitable for flat roof, bathroom, cellar, swimming pool, water tank and well, etc.

Description For Use

1. Mix Compac Concrete Waterproofer with clean water before mixing into mortar
2. Add the mixture in no.1 into sand and cement or ready made mortar and then mix well.
Use the well concrete mixture in the area where waterproofing is required
